

## Starting with FORGE®

**Now is the time to discover FORGE® and its extensive possibilities. After this course, you'll be able to get the most out of the software!**

This course will be your first approach to FORGE®. The first day lets you understand all of the data setup steps, the procedure for launching computations and how to analyze the main results. The second day will be devoted to more in-depth analysis of a full panel of results

for a better interpretation of physical phenomena. Key functions will be covered such as die stress analysis, fibering techniques, detecting folds as well as customizing the working environment.

### LEVEL

**Beginner**

### PREREQUISITES

**There is no prior requirement for this course.**

### GOALS

- **Data setup for forging (punching/closed-die forging)**
- **Launching a single computation and/or a computation sequence**
- **Analyzing simulation results**
- **Identifying and interpreting forging defects (folds, cracks, etc.)**
- **Visualizing fibering and monitoring physical quantities (temperature, pressure, etc.) at any point on the part**
- **Predicting die wear and performing tooling analysis (stress, etc.)**
- **Customizing your working environment**

### OTHER RECOMMENDED COURSES

- Finite element modeling fundamentals
- New functionalities of FORGE® NxT 4.1

DURATION		DATES 2024	
2 Days	18-19 January	23-24 May	18-19 September
TRAINING		PRICE EXCL. TAX	PARTICIPANTS
Inter-company		1160 € per person	3 to 8 people
In-company		2800 € per training	1 to 3 people

This course is also available for academic participants. More details page 9.

**DAY 1 >** 8.30 a.m. to 12.00 p.m. & 1.30 p.m. to 5.00 p.m.

<b>Introduction</b>	<ul style="list-style-type: none"> <li>• Presentation of Transvalor</li> <li>• Course goals</li> <li>• Review of finite element method</li> </ul>
<b>Data setup</b>	<ul style="list-style-type: none"> <li>• Presentation of the environment</li> <li>• Concepts: stores, processes, cases and stages</li> <li>• Importing geometries</li> <li>• Surface and volume meshes</li> <li>• Definition of kinematics</li> <li>• Rheology, friction, heat exchanges, materials database (FPD)</li> <li>• Object handling (creation, trimming)</li> <li>• Application to a tutorial</li> </ul>
<b>Launching computations</b>	<ul style="list-style-type: none"> <li>• Quick launch</li> <li>• Batch handler and chained simulations</li> </ul>
<b>Analyzing results</b>	<ul style="list-style-type: none"> <li>• Displaying results, the main scalars and vectors</li> <li>• Graphs, animations, VTFx export</li> <li>• Multi-window analysis</li> <li>• Handling animations and exporting results</li> </ul>
<b>Data setup for an industrial case</b>	<ul style="list-style-type: none"> <li>• Launching computation</li> </ul>

1st: initial cooling phase

2nd: upsetting

3rd: blocker

**DAY 2 >** 8.30 a.m. to 12.00 p.m. & 1.30 p.m. to 5.00 p.m.

<b>Analyzing results from an industrial case</b>	<ul style="list-style-type: none"> <li>• Interpreting results</li> </ul>
<b>Additional functions</b>	<ul style="list-style-type: none"> <li>• Marking grid and grain flow fibers</li> <li>• Predefined and post-processed sensors</li> <li>• Furnace-to-press initial cooling</li> <li>• Billet cutting, drilling and trimming</li> <li>• Import of tooling assembly</li> </ul>
<b>Die analysis</b>	<ul style="list-style-type: none"> <li>• Uncoupled and coupled approach</li> </ul>
<b>Working environment customization</b>	<ul style="list-style-type: none"> <li>• Creating specific models and data sets (materials, presses, friction, etc.)</li> </ul>
<b>Perspectives</b>	<ul style="list-style-type: none"> <li>• Introduction to advanced notions: induction, heat treatment</li> </ul>
<b>Conclusions</b>	<ul style="list-style-type: none"> <li>• Questions and course assessment</li> </ul>
